

BIO 126: Introduction to Biotechnology

The course covers the tools of the biotechnician: gene manipulation, biotechnological applications in medicine, forensics, and industry, bioethics, and biological risk assessment. Prerequisite: high school Chemistry and Biology. Three lecture hours per week. Instructional Support Fee applies. Gen. Ed. Competencies Met: Scientific Reasoning and Discovery.

Course Student Learning Outcomes

- 1. Discuss and evaluate the various theories of evolutionary science.
- 2. Describe and explain the scientific evidence for Darwinian evolution.
- 3. Explain and apply the principles of natural selection.
- 4. Analyze and predict the genetic processes involved in the evolution of populations.
- 5. Discuss the biological mechanisms of origin and extinction of species.
- 6. Compare/contrast the theories of the origins and evolution of life.
- 7. Describe and apply systematics and taxonomy of organisms.
- 8. Discuss and apply taxonomic keys to classify species of plants and animals.
- 9. Describe and explain biotic and abiotic factors that limit populations.

1

1. Explain and differentiate the ecological relationships among species.

1

1. Discuss and illustrate nutrient cycles, energy flows, and food webs.

1

1. Describe and debate human impacts on biological systems, including climate change, biodiversity loss, and resource degradation.

1

1. Critically analyze and discuss scientific literature in a written and oral report.

14. Demonstrate and report on successfully completed laboratory exercises describing methods, results, data analysis, and conclusions. **Credits:** 3

Program: Biology
